

# Chickens on the Farm

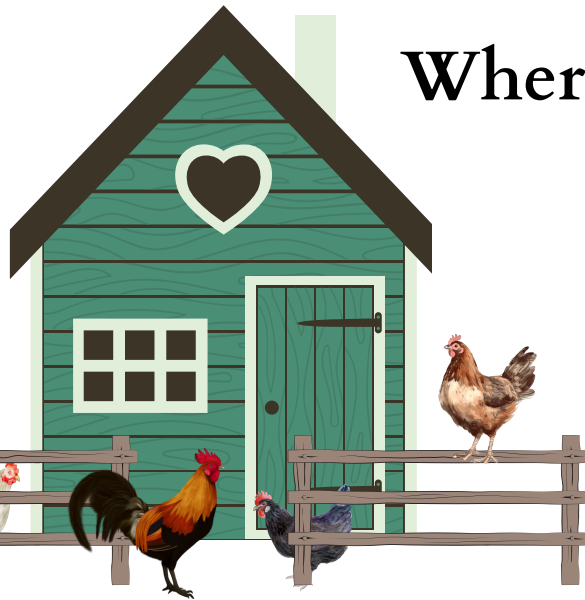

## How Chickens Help on the Farm:

Chickens eat all sorts of food scraps on the farm, helping us turn them into fertilizer for the plants! The chickens also eat lots of bugs, including bad bugs, helping protect our plants!

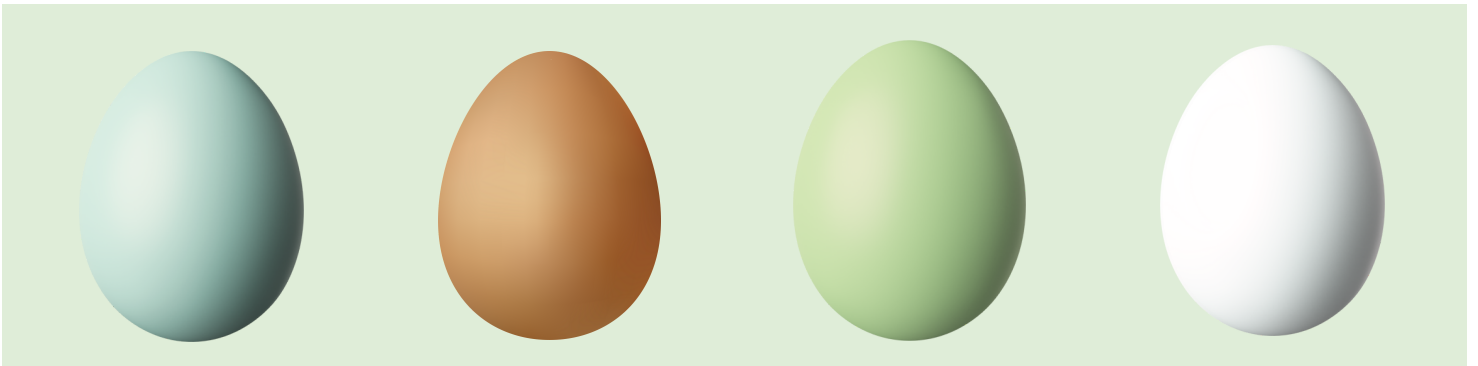

## Where They Live:

Our chickens live in their own coop farther back on the farm. They have lots of room to roam around, lots of logs and sticks to play on, and even a swing!

## Do they Lay Coloured Eggs?

The chickens we have on the farm lay different coloured eggs! Different breeds of chickens can actually lay different colours!
